ие сведения

то упражнение предназначено для закрепления знаний о командах show маршрутизатора. Вам не ужно будет выполнять настройку, вы просто изучите выходные данные отдельных команд show.

ть 1: Анализ выходных данных команды show

1: Подключитесь к маршрутизатору интернет-провайдера ISPRouter

Щелкните ISP PC (ПК интернет-провайдера), откройте вкладку Desktop (Рабочий стол) и выберите Terminal (Терминал).

Войдите в привилегированный режим EXEC.

Используйте следующие команды show, чтобы ответить на вопросы для закрепления из части 2:

show arp

show flash:

show ip route

show interfaces

show ip interface brief

show protocols

show users

show version

ть 2: Вопросы для повторения

кие команды выводят сведения об IP-адресе, префиксе сети и интерфейсе?

кие команды выводят сведения об IP-адресе и назначении интерфейса, но не выводят сведений о рефиксе сети?

кие команды выводят сведения о состоянии интерфейсов?

кие команды выводят сведения об IOS, заимствован из маршрутизатора?

Packet Tracer 231-352

ПК Интернет-провайдера

Desktop

Terminal

Output queue 10/40 (size/max)

5 minute input rate 0 bits/sec, 0 packets/sec

5 minute output rate 0 bits/sec, 0 packets/sec

0 packets input, 0 bytes, 0 no buffer

Received 0 broadcasts, 0 runs, 0 giants, 0 throttles

0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored, 0 short

0 watchdog, 1017 multicast, 0 pause input

0 input packets with dribble condition detected

0 packets output, 0 bytes, 0 underruns

0 output errors, 0 collisions, 1 interface resets

0 unknown protocol drops

0 babbles, 0 late collision, 0 deferred

0 low carrier, 0 no carrier

0 output buffer failures, 0 output buffers swapped out

GigabitEthernet0/1 is administratively down, line protocol is down (disabled)

Hardware is CM Gigabit Ethernet, address is 0030.f275.ce02 (bia 0030.f275.ce02)

MTU 1500 bytes, BW 1000000 Kbit, DLY 10 usec,

reliability 255/255, txload 1/255, rxload 1/255

Encapsulation ARPA, loopback not set

Keepalive set (10 sec)

Full-duplex, 100Mb/s, media type is RJ45

output flow-control is unsupported, input flow-control is unsupported

ARP type: ARPA, ARP Timeout 04:00:00,

Last input 00:00:00, output 00:00:00, output hang never

Last clearing of "show interface" counters never

Input queue: 0/75/0 (size/max/drops); Total output drops: 0

Queueing strategy: fifo

Output queue 10/40 (size/max)

5 minute input rate 0 bits/sec, 0 packets/sec

5 minute output rate 0 bits/sec, 0 packets/sec

0 packets input, 0 bytes, 0 no buffer

Received 0 broadcasts, 0 runs, 0 giants, 0 throttles

0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored, 0 short

0 watchdog, 1017 multicast, 0 pause input

0 input packets with dribble condition detected

0 packets output, 0 bytes, 0 underruns

0 output errors, 0 collisions, 2 interface resets

0 unknown protocol drops

0 babbles, 0 late collision, 0 deferred

0 low carrier, 0 no carrier

0 output buffer failures, 0 output buffers swapped out

Serial0/0/0 is administratively down, line protocol is down (disabled)

Hardware is HD44870

MTU 1500 bytes, BW 1544 Kbit, DLY 20000 usec,

reliability 255/255, txload 1/255, rxload 1/255

Encapsulation HDLC, loopback not set, Keepalive set (10 sec)

Last input never, output never, output hang never

Last clearing of "show interface" counters never

Input queue: 0/75/0 (size/max/drops); Total output drops: 0

Queueing strategy: weighted fair

The screenshot displays a dual-monitor setup. The left monitor shows the Cisco Packet Tracer application with a router configuration window open, displaying system information and license details. The right monitor shows a web browser with a PDF document titled "11.3.3.3 Packet Tracer - Using Show Commands.pdf". The PDF content includes instructions for using "show" commands in Packet Tracer, such as "show arp", "show flash:", "show ip route", "show interfaces", "show ip interface brief", "show protocols", "show users", and "show version". It also lists tasks for analyzing output and answering questions about IP addresses, interfaces, and system status.
